

THE CONCEPT KITCHEN

The Art of Asking

*Get what you actually want — from AI, from people, from
life ✨*

A practical guide to communicating clearly
and getting results.

You're Not Bad at AI

You've tried ChatGPT. You typed something in. You got back... word salad. So you tried again. Tweaked it. Still garbage. You started to wonder if you're just not smart enough for this stuff.

You're not the problem. You just never learned how to ask.

Here's the thing: most of us were never taught to communicate clearly. We say what we *mean*, but they hear something else. We get frustrated. They get confused. And now AI has made this gap impossible to ignore.

What if AI asked YOU the right questions instead?

That's exactly what this guide teaches. You'll learn a simple framework — and then flip it, so AI does the work for you.

This guide gives you three things:

1. **The Framework** — so you understand why this works
2. **The Instruction** — copy-paste it and let AI ask YOU the right questions
3. **The Shortcut** — just attach this file and go

Let's cook.

The 5 Questions

Every clear request answers these five questions. Miss one, and you're gambling on the output.

1 What's the situation?

Who you are. The context. What you've already tried.

2 What's the goal?

What does success look like? Be specific about the outcome.

3 Who's the audience?

Who is this for? Their level, their needs, their expectations.

4 What should I avoid?

Constraints. Tone. Things that would make this wrong.

5 What does good look like?

Examples, references, or templates to guide the output.

That's the framework. Think of it like cooking: telling a chef "make something good" gets you a coin flip. But "I need a quick weeknight pasta, feeds four, no dairy, something my kids will actually eat" — now they can deliver.

The problem? Most people forget this in the moment. Too tired. Too busy. Just want the answer.

So don't memorize it.
Make AI ask YOU these questions instead.

The Recipe

Instead of crafting the perfect prompt, flip it. Give AI this instruction and let it pull the right information out of you.

THE INSTRUCTION — COPY THIS

Before responding to any request I give you:

1. Ask me clarifying questions to understand the full context
2. Keep asking until you have:
 - My role / who I am
 - The situation / background
 - The goal / what I'm trying to achieve
 - The audience / who this is for
 - Any constraints / what to avoid
3. Summarize what you understood and ask me to confirm
4. Only after I confirm, give me your response

If I'm being vague, push back and ask for specifics. Don't guess.

How to Use It

1 Custom Instructions (ChatGPT)

Settings → Personalization → Custom Instructions → Paste in the "How would you like ChatGPT to respond?" box. Now every conversation starts with AI ready to ask you the right questions.

2 Start of Any Conversation

Just paste the instruction at the beginning of a new chat in ChatGPT, Claude, or any AI.

3 Attach This File

Upload this PDF to your conversation. Tell AI: "Use this as your guide for how to handle my requests." The AI will reference it throughout. No memorizing.

See It In Action

You:

"I need help writing a sales page."

AI:

"Sure! A few questions first:

- What are you selling?
- Who's your ideal customer — what's their biggest pain point?
- What makes your offer different from alternatives?
- Any specific tone — casual, professional, urgent?
- Do you have examples of sales pages you like?"

You:

"I'm selling a 6-week coaching program for freelancers who can't find clients. It's for people who are good at their craft but hate marketing themselves. Tone should be direct but encouraging — no sleazy sales vibes. I like how Marie Forleo writes."

AI:

"Got it — a 6-week coaching program for freelancers struggling with client acquisition. Direct and encouraging tone, no pushy tactics, inspired by Marie Forleo's style. Ready to write?"

You:

"Yes."

AI:

Delivers a sales page that actually sounds like you.

No more garbage outputs. No more "that's not what I meant." No more starting over.

Why This Works

You're not learning a new skill. **You're outsourcing the skill to AI.**

The framework (Context, Specifics, Constraints, Examples) is how good communicators think. But you don't have to hold it in your head. The instruction makes AI think that way FOR you.

And when AI asks you clarifying questions, it forces YOU to get clear — which makes everything better.

AI becomes your thinking partner,
not just a response machine.

The Cheat Sheet

Save this. Screenshot it. Keep it handy.

THE 5 QUESTIONS

- **Situation** — Who am I? What's the context?
- **Goal** — What does success look like?
- **Audience** — Who is this for?
- **Constraints** — What should I avoid?
- **Example** — What does good look like?

THE SHORTCUT (LET AI DO IT)

Paste this into Custom Instructions or any chat:

"Before responding to any request: 1) Ask me clarifying questions, 2) Get: role, situation, goal, audience, constraints, 3) Summarize and confirm before responding, 4) Push back if I'm vague."

Or just attach this file to your conversation.

Vague in, garbage out.

Clear in, magic out.
